Sign-language apps aim to facilitate communication, inclusiveness
Apps are an important tool in the future of learning. As different as each child is, that is how differently they all learn.
— Valerie Carter, founder of GraceSigns

Get the app
Sign Me a Story is available for free and Sign Me ABCs is available for $2.99 on both iOS and Android platforms. To learn more about GraceSigns, visit gravesigns.org.

GraceSigns, a nonprofit named after her daughter that creates sign-language instruction and literacy apps. GraceSigns’ first app, Sign Me a Story, was launched in 2013 on both Apple and Android platforms and has since garnered more than 100,000 downloads. It was followed last May by a second app, Sign Me ABCs.

Carter conceptualized and wrote the stories for Sign Me a Story and developed and orchestrated the production and content for Sign Me ABCs.

“The biggest challenge has been that I am literary, not tech-oriented,” she says. “However, we have had many wonderful volunteer programmers, designers, artists and marketers help us develop both apps.”

‘Affordable and accessible’ apps focus on inclusiveness
Sign Me a Story, which is free, uses reading to teach sign language, while Sign Me ABCs, which retails for $2.99, uses stories, songs and games to teach sign language.

Both apps are geared toward children aged preschool and up.

“Apps are an important tool in the future of learning,” Carter says. “As different as each child is, that is how differently they all learn.”

Particularly with Sign Me ABCs, she says, her team tried to incorporate multiple modalities to appeal to many different learning styles. The app uses sight, so a child can read a letter or word, see the letter or word signed and view an illustration that matches the letter or word. It also uses sound, so a child can hear a letter or word pronounced with accompanying music. And it uses touch, reinforcing the letters or words with interactive games.

Both apps include videos of Grace, some of her friends and other children of different ages and abilities signing.

Because Grace has always been dramatic and a dancer, Carter says, it seemed natural to feature her as the “face of the organization.” Having other kids sign is also a way to focus on diversity and inclusiveness through the apps.

“We realized that we wanted to have our apps be for every kid, not just kids with disabilities, so we thought it would be important to include a range of kids as our ‘signing stars,’” she says.

“Grace likes seeing herself in the apps but enjoys seeing the other kids just as much,” Carter says. “She is quite a ham and has become accustomed to being videotaped and photographed. As she has become a teenager she is less eager to participate, but does like seeing the end result.”

Carter says the goal is to create apps that are “tech-inclusive, user-friendly, and lively.”

“We strive to make this affordable and accessible for all,” she says.

Grace’s speech therapist, Laura O’Grady, says the Sign Me ABCs app was tested with a lot of kids.

“Some kids are just wired to visually sign. The animals in the app are really loved by children of all ages whether they are special needs or non-needs kids — it engages them,” she says.

“Grace is a techno-kid, like so many in her generation who spend time on laptops, iPads and smart phones,” O’Grady adds.

“This is a generation that has many learning styles in the classroom.”

Aiming for a wider reach
Grace, who will be a freshman at Redwood High School in the fall, now speaks more than she signs, Carter says.

“We use signing as a prompt with her now to expand her language, to encourage her to use a full sentence. She only signs with a couple of friends at school who do not have language,” Carter says.

For expanded language with her teachers and speech therapist, Grace uses an augmentative speech app that helps her expand her thought process and communication with greater detail and clarity.

She will continue learning American Sign Language at school next year at Redwood with other students who have special needs, and she will attend art, drama and P.E. with the high school’s general student population.

She’ll also be busy with extracurricular activities. She was previously in the chorus at Hall Middle School in Larkspur. Some of her other hobbies include dance, martial arts, softball, cooking, swimming and horseback riding.

She and her older brother, Jonathan, communicate regularly online with FaceTime. He is a recent graduate of California Polytechnic State University with a master’s in economics. Grace also has a half-sister, Elizabeth, and half-brother, Robert, who are in their 30s.

Carter runs GraceSigns on a tight operating budget of less than $15,000 annually, does not take a salary and is seeking grants to develop future educational sign-language apps.

Grace’s father, John, who has learned a little sign language through household interactions, says he’s proud of Carter’s effort and of the most recent app’s potential.

“I am hopeful that the new application Sign Me ABCs will be widely adopted as a way for all of us to learn sign language and more,” John says.

Carter is doing her best to make that happen. She hopes to meet with the Reed Union School District and the Technology Center of Marin to explore incorporating Sign Me ABCs into school curriculums.

“I will be spending the summer promoting this app,” she says. “There are many people helping our kids. I am just doing this little piece.”
